*Born in Africa* Martin Meredith, 2011-05-10 Africa does not give up its secrets easily. Buried there lie answers about the origins of humankind. And yet, though vital clues still remain hidden, scientists have over the last century transformed our understanding about the beginnings of human life. In *Born in Africa*, Martin Meredith follows scientists' trail of discoveries about human origins, recounting their intense rivalry, personal feuds, and fierce controversies as well as their feats of skill and endurance. And he limns their momentous accomplishments: Scientists have identified more than twenty species of extinct humans. They have firmly established Africa as the birthplace not only of humankind but also of modern humans. They have revealed how early technology, language ability and artistic endeavour all originated in Africa; and they have shown how small groups of Africans spread out from Africa in an exodus sixty-thousand years ago to populate the rest of the world.

*How Did Humans Evolve?* Richard D. Alexander, 1990

**The First Humans** Frederick E. Grine, John G. Fleagle, Richard E. Leakey, 2009-05-24 There are some issues in human paleontology that seem to be timeless. Most deal with the origin and early evolution of our own genus - something about which we should care. Some of these issues pertain to taxonomy and systematics. How many species of *Homo* were there in the Pliocene and Pleistocene? How do we identify the earliest members of the genus *Homo*? If there is more than one Pliocene-Pleistocene species, how do they relate to one another, and where and when did they evolve? Other issues relate to questions about body size, proportions and the functional adaptations of the locomotor skeleton. When did the human postcranial "Bauplan" evolve, and for what reasons? What behaviors (and what behavioral limitations) can be inferred from the postcranial bones that have been attributed to *Homo habilis* and *Homo erectus*? Still other issues relate to growth, development and life history strategies, and the biological and archeological evidence for diet and behavior in early *Homo*. It is often argued that dietary change played an important role in the origin and early evolution of our genus, with stone tools opening up scavenging and hunting opportunities that would have added meat protein to the diet of *Homo*. Still other issues relate to the environmental and climatic context in which this genus evolved.

The Human Story Charles Lockwood,2008 Anthropology professor Charles Lockwood tells the amazing story of human evolution in a concise and compelling introduction to all our ancestors and extinct relatives. He draws on the explosion of discoveries made over the past 20 years to demystify the fascinating cast of characters who hold the secret to our origins, and describes the main sites, individual fossils, key scientific breakthroughs, and latest research that have fed our knowledge. With the help of a rich assortment of photographs, reconstructions, and maps, Lockwood takes us from the earliest hominins, who date back six or seven million years ago, to contemporary homo sapiens, providing the basic facts about each species: what it looked like, what it ate, how and when it lives, and how we know this information. Created in association with London's Natural History Museum, this is a truly readable, up-to-date, well-illustrated, and user-friendly summary of the evidence as it stands today.

*Origins of Humans* IntroBooks,2018-02-21 Human evolution can be considered to be a lengthy procedure of several transformations in which the people originated from the ape-like ancestors. There are several scientific evidence that reveals that the behavioral and the physical traits that are shared by all the organisms have originated from the ape-like ancestors. They have evolved across lengthy periods of approximately six million years ago. One of the earliest human traits that have defined the human evolution, bipedalism is the ability for walking on two legs have evolved over four million years ago. There are several other human characteristics including the complex and human brains, the ability to make several innovative tools, along with the complex symbolic representation and elaborative cultural diversity have emerged mainly during the past several millions of years.

**From Where We Came** Chris Young Kelly,2021-04-18 Did you know that a significant percentage of us are part Neanderthal in our genetic makeup? So, were they as smart as we are? Why and how are we different? Could we talk to them? Or more interestingly, did we? What do these questions have to do with from where we came?" A comprehensive overview of how we came to be. If you're searching for answers and tired of information overload from the media, you are not alone. Fortunately, despite all the noise, evolution boils down to a few physics and math principles. A significant part of the basic process by which we evolved from molecules can be summed up with math similar to the process of boarding a city bus. Through pop culture references, personal experiences, humor, graphics, and common sense, let's explore this topic through one physicist's eyes, wrapped in plain English. We will dive through evolution at the molecular and human levels connected by cause and effect. Follow along as we explore how humans have survived and even prospered, against all odds, through millions of years. It should become apparent that we are all alike in every way, except for minute differences in our genes. We cannot help but be motivated to find ways to better ourselves as a species. We are all blood brothers and sisters, all 7.8 billion of us, after all.

*Lucy's Legacy* Dr. Donald Johanson,Kate Wong,2010-06-01 "Lucy is a 3.2-million-year-old skeleton who has become the

spokeswoman for human evolution. She is perhaps the best known and most studied fossil hominid of the twentieth century, the benchmark by which other discoveries of human ancestors are judged.”-From *Lucy’s Legacy* In his New York Times bestseller, *Lucy: The Beginnings of Humankind*, renowned paleoanthropologist Donald Johanson told the incredible story of his discovery of a partial female skeleton that revolutionized the study of human origins. Lucy literally changed our understanding of our world and who we come from. Since that dramatic find in 1974, there has been heated debate and-most important-more groundbreaking discoveries that have further transformed our understanding of when and how humans evolved. In *Lucy’s Legacy*, Johanson takes readers on a fascinating tour of the last three decades of study-the most exciting period of paleoanthropologic investigation thus far. In that time, Johanson and his colleagues have uncovered a total of 363 specimens of *Australopithecus afarensis* (Lucy’s species, a transitional creature between apes and humans), spanning 400,000 years. As a result, we now have a unique fossil record of one branch of our family tree-that family being humanity-a tree that is believed to date back a staggering 7 million years. Focusing on dramatic new fossil finds and breakthrough advances in DNA research, Johanson provides the latest answers that post-Lucy paleoanthropologists are finding to questions such as: How did *Homo sapiens* evolve? When and where did our species originate? What separates hominids from the apes? What was the nature of Neandertal and modern human encounters? What mysteries about human evolution remain to be solved? Donald Johanson is a passionate guide on an extraordinary journey from the ancient landscape of Hadar, Ethiopia-where Lucy was unearthed and where many other exciting fossil discoveries have since been made-to a seaside cave in South Africa that once sheltered early members of our own species, and many other significant sites. Thirty-five years after Lucy, Johanson continues to enthusiastically probe the origins of our species and what it means to be human.

*The Dawn of Human Culture* Richard G. Klein, 2007-08-15 A bold new theory on what sparked the big bang of human culture The abrupt emergence of human culture over a stunningly short period continues to be one of the great enigmas of human evolution. This compelling book introduces a bold new theory on this unsolved mystery. Author Richard Klein reexamines the archaeological evidence and brings in new discoveries in the study of the human brain. These studies detail the changes that enabled humans to think and behave in far more sophisticated ways than before, resulting in the incredibly rapid evolution of new skills. Richard Klein has been described as the premier anthropologist in the country today by *Evolutionary Anthropology*. Here, he and coauthor Blake Edgar shed new light on the full story of a truly fascinating period of evolution. Richard G. Klein, PhD (Palo Alto, CA), is a Professor of Anthropology at Stanford University. He is the author of the definitive academic book on the subject of the origins of human culture, *The Human Career*. Blake Edgar (San Francisco, CA) is the coauthor of the very successful *From Lucy to Language*, with Dr. Donald Johanson. He has written extensively for *Discover*, *GEO*, and numerous other magazines.

*The Origin of Modern Humans* Roger Lewin, 1993 Many new findings, speculations, and reevaluations have sharpened

our views of modern human origins since then. Nevertheless, the controversy continues, as the patchy fossil record and new evidence derived from genetic techniques have given rise to competing theories. Are we the result of a single uninterrupted lineage, with each distinct species of human leading directly to the next? Or, do species such as the Neanderthal represent offshoots of an evolutionary tree that died out without leaving successors? Did modern humanity arise roughly contemporaneously in different parts of the world or from a single species in a single location? And how do biological, linguistic, artistic, and technological factors distinguish Homo sapiens from near and distant relatives? At stake in the argument is nothing less than the very definition of what it means, biologically and culturally, to be human

Humans Wallace Shaunfield, 2015-07-22 The research and writing of the book, HUMANS, has been a time of discovery and revelation. The intention was to complete the fascinating story touched on in the author's first two books of how early Homo sapiens became modern humans. Humans today are anatomically the same as the early Homo sapiens who first appeared on Earth about 200,000 years ago; however, there is a difference. The evidence shows they were instinctively-driven creatures much like their Homo ancestors. The hypothesis was that the key difference was modern humans have the unique attribute of consciousness. This study confirmed that and discovered how and when the transition to modern humans was made. But, much more was uncovered, including the story of how Homo sapiens acquired the broad set of key attributes that makes humans unique, compared to all other living creatures. In addition to consciousness, other attributes were discovered, including how and when the Moral Code, our conscience, our sense of a god, plus many other attributes came into being. The study was scientific in nature using secular evidence, solid logic and reason to tell the story; however, it was clearly shown that the appearance of Homo sapiens on Earth was a supernatural event, which I deduced was an act of God, just as described in the Bible. Topics, like the origination of the moral code, have been debated by scholars throughout the ages with no conclusion. Now, with secular facts, solid logic, and reason, it is also shown that the acquisition of the moral code was a supernatural act of God. The realization of a novel logic principal, I call Non-Evolving Attributes (NEA), allowed this to be determined with a high degree of confidence. Simply stated, the NEA principal says that if you have a group of descendants from a common ancestor, randomly evolved through many different branches, isolated in time and/or distance, and that all descendants have an identical attribute, then that attribute could not have randomly evolved; because if it did, then it would have had to evolve in the same way in each branch, and that is essentially impossible. If that attribute did not evolve, then the original ancestor must have that same attribute. This is profound and very powerful. If you discover a group of identical attributes in a group of people isolated from each other, but with a common ancestor, then you know right away the ancestor had that same attribute. This same principal also showed the Origin-of-Life was a supernatural act of God. No evolution was involved. This important question has long been pondered with no answer until now. This study is a breakthrough in understanding how we humans came into being. This is an important subject and one that has been debated

by scholars for ages and now we have an answer. These are profound answers to long held questions, and which could cause a great deal of controversy

*Human Origins 101* Holly M. Dunsworth,2007-08-30 What should the average person know about science? Because science is so central to life in the 21st century, science educators and other leaders of the scientific community believe that it is essential that everyone understand the basic concepts of the most vital and far-reaching disciplines. *Human Origins 101* does exactly that. This accessible volume provides readers - whether students new to the field or just interested members of the lay public - with the essential ideas of the origins of humans using a minimum of jargon and mathematics. Concepts are introduced in a progressive order so that more complicated ideas build on simpler ones, and each is discussed in small, bite-sized segments so that they can be more easily understood. *Human Origins 101* enables students and the general public to understand the basic concepts underlying our knowledge of our evolution as a species. This small volume covers: ; A brief history of paleoanthropology, and the discovery of human's place in nature ; Evolution and the Origin of Life ; Clues to human origins from genetics ; The fossil and archaeological records ; The distinctive traits that makes us human ; The diversity of modern humans With a bibliography, glossary, and discussion of hoaxes, fringe theories, and hot-button issues, *Human Origins 101* provides the perfect starting point for anyone wishing to understand how scientists know how humans evolved.

Encyclopaedia Britannica Hugh Chisholm,1910 This eleventh edition was developed during the encyclopaedia's transition from a British to an American publication. Some of its articles were written by the best-known scholars of the time and it is considered to be a landmark encyclopaedia for scholarship and literary style.

*In the Light of Evolution* National Academy of Sciences,2007 The Arthur M. Sackler Colloquia of the National Academy of Sciences address scientific topics of broad and current interest, cutting across the boundaries of traditional disciplines. Each year, four or five such colloquia are scheduled, typically two days in length and international in scope. Colloquia are organized by a member of the Academy, often with the assistance of an organizing committee, and feature presentations by leading scientists in the field and discussions with a hundred or more researchers with an interest in the topic. Colloquia presentations are recorded and posted on the National Academy of Sciences Sackler colloquia website and published on CD-ROM. These Colloquia are made possible by a generous gift from Mrs. Jill Sackler, in memory of her husband, Arthur M. Sackler.

Evolution Scientific American Editors,2017-08-21 The complex story of human evolution is a tale seven million years in the making. Each new discovery adds to or revises our story and our understanding of how we came to be the way we are. In this eBook, *The Human Odyssey*, we explore the evolution of those characteristics that make us human. The first section, "Where We Came From," looks at our family tree and why some branches survived and not others. Swings in climate are emerging as a factor in what traits succeeded and failed, as we see in "Climate Shocks;" meanwhile in "Human Hybrids,"

DNA analyses show that *Homo sapiens* interbred with other human species, which played a key role in our survival. Section Two, "What Makes Us Special," examines those traits that separate us from other primates. Recent data indicate that our hairless skin was important to the rise of other human features, and other research is getting closer to illuminating how humans became monogamous, as shown in "The Naked Truth" and "Powers of Two," respectively. In the final section, "Where We Are Going," we speculate on the future of human evolution in a world where advances in technology, medicine and other areas protect us from harmful factors like disease, causing some scientists to claim that humans are no longer subject to natural selection and our evolution has ceased. Far from that, in "Still Evolving," author John Hawks discusses how humans have evolved rapidly over the past 30,000 years, as seen in relatively recent traits like blue eyes or lactose tolerance, why such rapid evolution has been possible and what future generations might look like. Like us, our story will continue to evolve.

**The Origins of Modern Humans** Fred H. Smith, James C. Ahern, 2013-09-23 This update to the award-winning *The Origins of Modern Humans: A World Survey of the Fossil Evidence* covers the most accepted common theories concerning the emergence of modern *Homo sapiens*—adding fresh insight from top young scholars on the key new discoveries of the past 25 years. *The Origins of Modern Humans: Biology Reconsidered* allows field leaders to discuss and assess the assemblage of hominid fossil material in each region of the world during the Pleistocene epoch. It features new fossil and molecular evidence, such as the evolutionary inferences drawn from assessments of modern humans and large segments of the Neandertal genome. It also addresses the impact of digital imagery and the more sophisticated morphometrics that have entered the analytical fray since 1984. Beginning with a thoughtful introduction by the authors on modern human origins, the book offers such insightful chapter contributions as: Africa: The Cradle of Modern People Crossroads of the Old World: Late Hominin Evolution in Western Asia A River Runs through It: Modern Human Origins in East Asia Perspectives on the Origins of Modern Australians Modern Human Origins in Central Europe The Makers of the Early Upper Paleolithic in Western Eurasia Neandertal Craniofacial Growth and Development and Its Relevance for Modern Human Origins Energetics and the Origin of Modern Humans Understanding Human Cranial Variation in Light of Modern Human Origins The Relevance of Archaic Genomes to Modern Human Origins The Process of Modern Human Origins: The Evolutionary and Demographic Changes Giving Rise to Modern Humans The Paleobiology of Modern Human Emergence Elegant and thought provoking, *The Origins of Modern Humans: Biology Reconsidered* is an ideal read for students, grad students, and professionals in human evolution and paleoanthropology.

**The Origin Of Humankind** Richard Leakey, 1994-10-07 The world's foremost fossil hunter tells the story of the first humans. At the heart of Leakey's new picture of evolution is the introduction of a heretical notion: once the apes walked upright, the evolution of modern humans became possible and perhaps inevitable. Columbia Pictures is developing a major

motion picture inspired by Leakey's life and work.

*Understanding Climate's Influence on Human Evolution* National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on the Earth System Context for Hominin Evolution, 2010-04-17  
The hominin fossil record documents a history of critical evolutionary events that have ultimately shaped and defined what it means to be human, including the origins of bipedalism; the emergence of our genus Homo; the first use of stone tools; increases in brain size; and the emergence of Homo sapiens, tools, and culture. The Earth's geological record suggests that some evolutionary events were coincident with substantial changes in African and Eurasian climate, raising the possibility that critical junctures in human evolution and behavioral development may have been affected by the environmental characteristics of the areas where hominins evolved. *Understanding Climate's Change on Human Evolution* explores the opportunities of using scientific research to improve our understanding of how climate may have helped shape our species. Improved climate records for specific regions will be required before it is possible to evaluate how critical resources for hominins, especially water and vegetation, would have been distributed on the landscape during key intervals of hominin history. Existing records contain substantial temporal gaps. The book's initiatives are presented in two major research themes: first, determining the impacts of climate change and climate variability on human evolution and dispersal; and second, integrating climate modeling, environmental records, and biotic responses. *Understanding Climate's Change on Human Evolution* suggests a new scientific program for international climate and human evolution studies that involve an exploration initiative to locate new fossil sites and to broaden the geographic and temporal sampling of the fossil and archeological record; a comprehensive and integrative scientific drilling program in lakes, lake bed outcrops, and ocean basins surrounding the regions where hominins evolved and a major investment in climate modeling experiments for key time intervals and regions that are critical to understanding human evolution.

*How did humans and language originate?* Abdul Waheed , How did man originate, this is a very complex and mysterious question which has been going on for centuries and its investigation is going on day by day. Similarly, there are many guesses about the language too, but it is not known, the search is going on continuously, but the proof of the script itself is found a little or possibly. Both these subjects are very interesting and mysterious. On the occasion of this, this book is presented in front of you, some of which has been revealed with some information. If you have more information than this, please inform, thanks, yours Abdul Waheed, Barabanki, UP, India. Also available in paperback version

*The Origin of Our Species* Chris Stringer, 2012 Chris Stringer's bestselling *The Origin of our Species* tackles the big questions in the ongoing debate about the beginnings of human life on earth. Do all humans originate from Africa? How did we spread across the globe? Are we separate from Neanderthals, or do some of us actually have their genes? When did humans become 'modern' - are traits such as art, technology, language, ritual and belief unique to us? Has human evolution

stopped, or are we still evolving? Chris Stringer has been involved in much of the crucial research into the origins of humanity, and here he draws on a wealth of evidence - from fossils and archaeology to Charles Darwin's theories and the mysteries of ancient DNA - to reveal the definitive story of where we came from, how we lived, how we got here and who we are. 'A new way of defining us and our place in history' Sunday Times 'When it comes to human evolution Chris Stringer is as close to the horse's mouth as it gets ... The Origin of Our Species should be the one-stop source on the subject. Read it now' BBC Focus 'Britain's foremost expert on human evolution ... you need a primer to make sense of the story so far. Here is that book' Guardian 'Combines anecdote and speculation with crisp explanation of the latest science in the study of the first humans ... an engaging read' New Scientist Chris Stringer is Britain's foremost expert on human origins and works in the Department of Palaeontology at the Natural History Museum. He also currently directs the Ancient Human Occupation of Britain project, aimed at reconstructing the first detailed history of how and when Britain was occupied by early humans. His previous books include African Exodus- The Origins of Modern Humanity, The Complete World of Human Evolution and most recently, Homo Britannicus, which was shortlisted for the Royal Society Science Book of the Year in 2007.
